

Define the Problem Statements

The idea for this project came from a simple workplace problem: employees often need help with issues such as access problems, payroll questions, hardware or software requests, and HR-related clarifications. When these requests are sent through email or informal messages, it becomes difficult to keep track of them and know who is responsible for the next step.

I wanted to build a small ServiceNow solution that gives employees one clear place to raise an issue and gives the support team a structured record to work with.

Customer Problem Statement

Problem Summary

The main problem is not only raising an issue; it is making the whole process consistent and visible. The solution therefore needs a standard form, useful issue information, a clear status, and a way for the support team to work on the request after it is submitted.

Reference

The customer problem statement format was followed from the supplied ideation template and its referenced problem-statement approach.

Tables and Structured Information

Date		Team ID	
Project Name	Employee Raise Issue – ServiceNow	Maximum Marks	

I am (Customer)	An employee who needs help with a workplace-related issue.
I'm trying to	Raise my issue with the right details and get it to the appropriate support team.
But	Requests are often shared through different channels, so the information is not always complete or easy to track.
Because	There is no single, standard process for capturing and following employee issues.
Which makes me feel	Uncertain about the status of my request and when it will be resolved.
