

# Employee Raise Issue – All 5 Phases

Employee Raise Issue – ServiceNow Project

## Phase 1 – Ideation

The project starts with the employee problem: requests are often sent through different channels and are difficult to track. The goal is to give employees one standard way to raise workplace issues.

## Phase 2 – Requirement Analysis

The solution needs an employee-friendly form, structured issue fields, validation, record creation, and a way for the support team to follow the request.

## Phase 3 – Project Design

The design uses the Employee Center ServiceNow application, the Employee Raise Issue custom table, a Record Producer, Service Portal, UI Policies and supporting scripts/configuration.

## Phase 4 – Project Planning

The work is split into three practical sprints covering foundation, design/configuration, development and validation, with 44 planned story points.

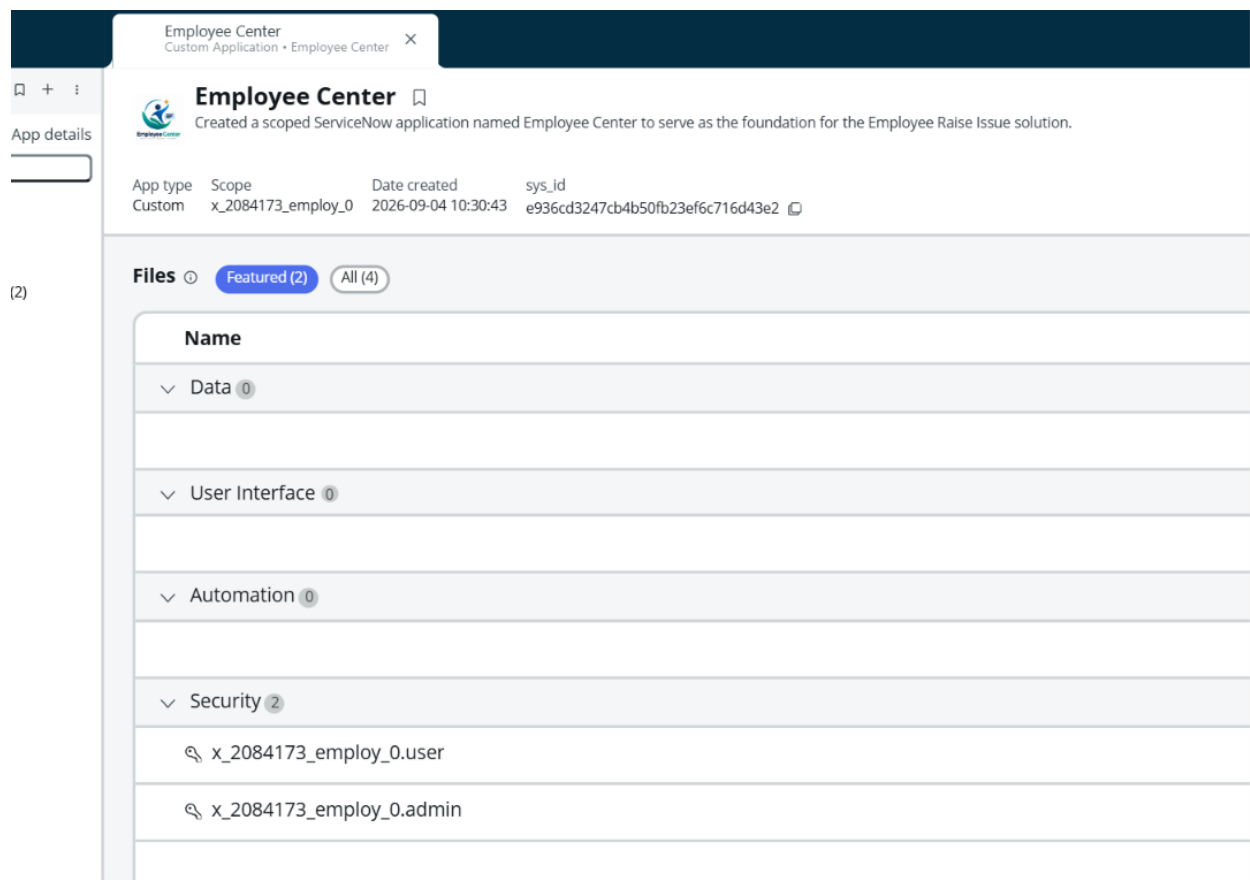

## Phase 5 – Project Development

The configured application provides the Raise Employee Issue experience, stores the request in the backend table, and applies the documented UI Policies and portal configuration.

## Current Implementation Evidence

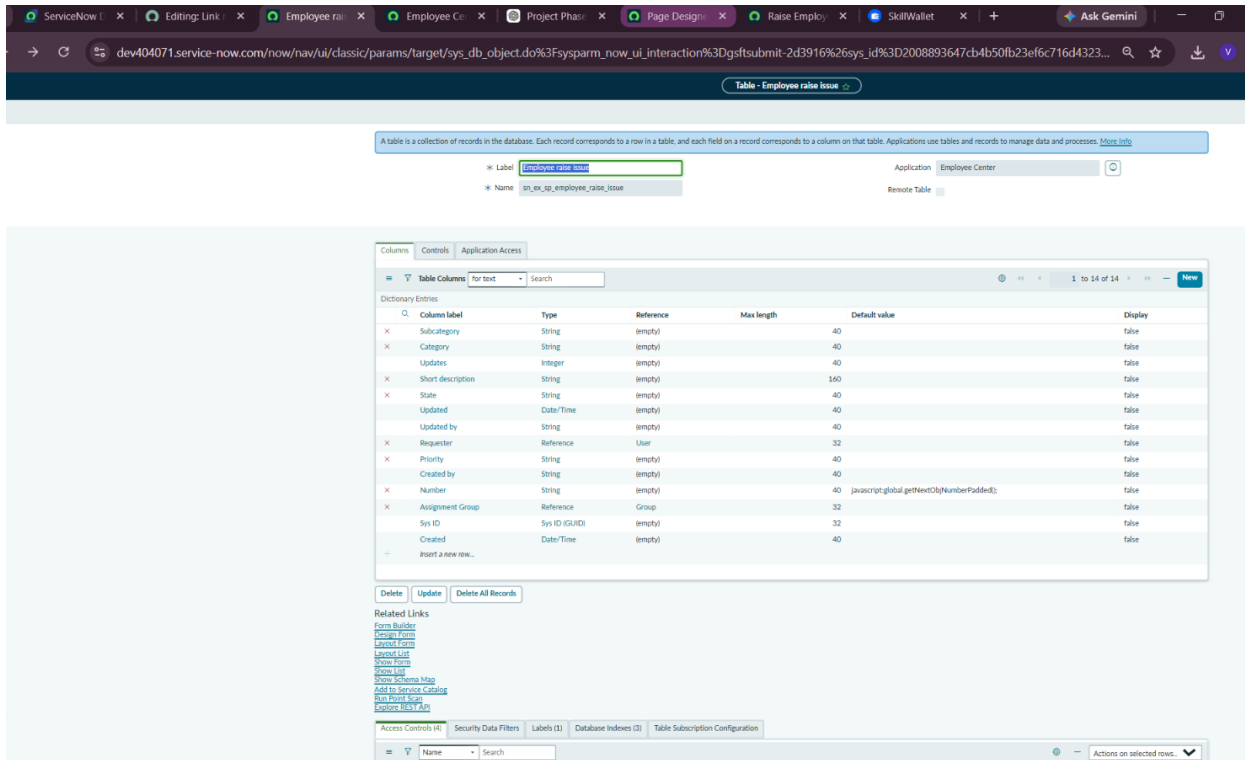

The screenshots below are the implementation evidence supplied for the project so far.

Evidence 1 — Employee Center Application

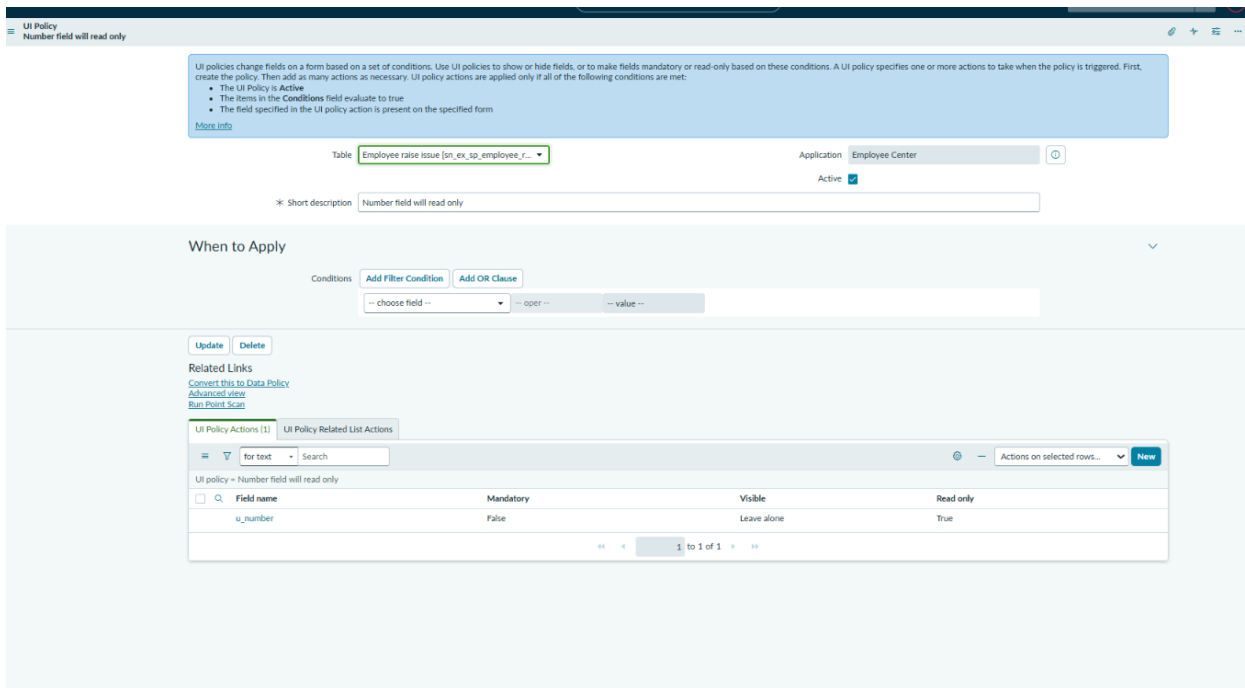

Shows the custom Employee Center application and its scoped application details.

Evidence 2 — Employee Raise Issue Table

Shows the custom table, its application, and the configured columns.

### Evidence 3 — Number Field Read-Only UI Policy

Shows the active policy and its action making the Number field read-only.

### Evidence 4 — Short Description Mandatory UI Policy

UI policies change fields on a form based on a set of conditions. Use UI policies to show or hide fields, or to make fields mandatory or read-only based on these conditions. A UI policy specifies one or more actions to take when the policy is triggered. First, create the policy. Then add as many actions as necessary. UI policy actions are applied only if all of the following conditions are met:

- The UI Policy is Active
- The items in the Conditions field evaluate to true
- The field specified in the UI policy action is present on the specified form
